

Where Should the New Well Go?

You need a pencil.

1 Explore

Read the map and the table. Four sites have been surveyed.

Site	To houses (m)	Ground	To river (m)
A	120	rocky	400
B	250	soft	90
C	400	soft	150
D	150	marshy	60

2 Create

- 1 A well must be at least 100 m from the river. Cross out any site that fails.
- 2 Ring the site you would dig. Soft ground is easier than rocky ground.

3 Explain

Explain your choice using two numbers from the table.

What if? The village doubles in size. Would your answer change?
